INFORMATION ON RESEARCH RESULTS

1. General information:

Project code: THS2026-67

Project title: Development of a Multi-Tenant Task Management Application

Coordinator: Ngô Hưng Thịnh

Implementing institution: College of Information and Communication Technology,
Can Tho University

Reference duration: 6 months, May–October 2026; official dates require confirmation.

2. Objective(s):

Design and implement a multi-tenant Kanban reference architecture. Analyze tenant context, isolation, authorization, consistency and resource management, with traceability from problems to evidence.

3. Contribution:

The preliminary contribution is an implemented reference architecture and a verification framework for one business workflow. Academic novelty and comparative effectiveness require further literature review and registered experiments.

4. Research results:

Source inspection and dated local records describe the API, worker, web client and three data placements. Five problem groups, an evidence register and conditional RQ answers are documented. Performance measurements, SUS and an optimal-placement conclusion remain pending.

5. Products:

Application source, architecture/API/test documents and LaTeX/PDF outputs are maintained in the project records. Formal delivery status requires confirmation by the team.

6. Effects, transfer and applicability:

The material supports architecture review and study. Deployment on the public Internet, real providers and measured educational or operational impact require separate evidence.
